Structures of Story Problems
Separate

Separate story problems have an action that causes a decrease. These problems have the same three quantities as join problems: the result amount, the change amount, and the initial amount.

When drawing separate problems, teachers should use a consistent format. This format has the three steps described below, but only one final diagram. It is important to note that students may draw a variety of diagrams representing what they do with concrete materials, and these (provided they are logical) should be accepted.

<table>
<thead>
<tr>
<th>Sample Result Unknown</th>
</tr>
</thead>
<tbody>
<tr>
<td>Kevin had 37 marbles before he went out to recess. During recess he lost 15 marbles. How many marbles does he have left?</td>
</tr>
</tbody>
</table>

**Step 1:**
Start with the template for separate problems.

- [Diagram showing start with template]

**Step 2:**
Fill in what I know and use a question mark (?) to indicate the unknown quantity.

- [Diagram showing filled-in template]

**Step 3:**
Circle what is separated and fill in the unknown bubble.

- [Diagram showing circled and filled bubble]

Step 3, the final diagram, is all that is seen by the teacher.
# Structures of Story Problems

## Separate

The same process is used with all three types of separate questions.

<table>
<thead>
<tr>
<th>Sample</th>
<th>Change</th>
<th>Unknown</th>
</tr>
</thead>
</table>

Kevin had 37 marbles before he went out to recess. During recess he lost some marbles. He now has 22 marbles left. How many did he lose during recess?

**Step 1:**
Start with the template for separate problems.

**Step 2:**
Fill in what I know and use a question mark (?) to indicate the unknown quantity.

**Step 3:**
Circle what is separated.
Kevin had some marbles before he went out to recess. During recess he lost 15 marbles. He now has 22 marbles left. How many did he have before recess?

**STEP 1:**
Start with the template for separate problems.

**STEP 2:**
Fill in what I know and use a question mark (?) to indicate the unknown quantity.

**STEP 3:**
Fill in the unknown.

**NOTE:**
When completed, the pictures for all three types of separate problems will look the same except for the location of the question mark.
A farmer has 6 apples. She gives away 4 of them. How many does she have left?
The remaining structures are introduced as students begin to make the connection between addition and subtraction. Students continue using set models and ten frames should also be used extensively.

### Result Unknown

Gillian had 10 shells in her bucket. She gave her brother 3 shells. How many does she have left?

![Diagram showing subtraction](image1)

**Think Subtraction:**

\[10 - 3 = 7\]

### Change Unknown

Gillian had 10 shells in her bucket. She gave some to her brother. Now she has 7 shells left. How many did she give to her brother?

![Diagram showing subtraction](image2)

**Think Subtraction:**

\[10 - 3 = 7\]

Remove shells from 10 until you have 7 left, so you removed 3

or

\[10 - 7 = 3\]

Start with 10 and subtract the 7 she has left to find the 3 she gave away

### Initial Unknown

Annie had some cookies. She gave Alex 4 of them. Now she has 7 cookies left. How many cookies did Annie have to begin with?

![Diagram showing addition](image3)

**Think Addition:**

\[7 + 4 = 11\]

The 7 that remain, plus the 4 that were given away together total 11 cookies
**Addition and Subtraction Grade 2**

<table>
<thead>
<tr>
<th><strong>Result Unknown</strong></th>
<th>Kevin had 37 marbles before he went out to recess. During recess he lost 15 marbles. How many marbles does he have left?</th>
</tr>
</thead>
</table>
| ![Diagram](image1) | **Think Subtraction:**  
|                   | 37 – 15 = 22  
|                   | He started with 37 and lost 15, he has 22 left. |

<table>
<thead>
<tr>
<th><strong>Change Unknown</strong></th>
<th>Kevin had 37 marbles before he went out to recess. During recess he lost some marbles. He now has 22 marbles left. How many did he lose during recess?</th>
</tr>
</thead>
</table>
| ![Diagram](image2) | **Think Subtraction:**  
|                   | 37 – 22 = 15  
|                   | He started with 37 and subtracted the 22 he had left to get the 15 that he lost |

<table>
<thead>
<tr>
<th><strong>Initial Unknown</strong></th>
<th>Kevin had some marbles before he went out to recess. During recess he lost 15 marbles. He now has 7 marbles left. How many did he have before recess?</th>
</tr>
</thead>
</table>
| ![Diagram](image3) | **Think Addition:**  
|                   | 15 + 7 = 22  
|                   | The 7 that he has plus the 15 he lost is what he started with |
## Addition and Subtraction Grade 3

### Result Unknown
Carol saved $231 from doing chores. She spent $98 to buy some school clothes. How much money does she have left?

**Think Subtraction:**
\[ 231 - 98 = 133 \]

### Change Unknown
Carol saved $231 from doing chores. She spent some of it to buy some school clothes. She has $133 left. How much did she spend?

**Think Subtraction:**
\[ 231 - 133 = 98 \]

### Initial Unknown
Gillian had some shells in her bucket. She gave her brother 23 of them. She has 39 left. How many did she begin with?

**Think Addition:**
\[ 23 + 39 = 62 \]
### Addition and Subtraction Grade 4 Separate

<table>
<thead>
<tr>
<th>Result Unknown</th>
<th>Maya had (\frac{3}{4}) of a pizza. She gave her friend (\frac{1}{4}) of the pizza. How much does she have left?</th>
</tr>
</thead>
</table>
| ![Diagram](image1) | **Think Subtraction:**  
\[
\frac{3}{4} - \frac{1}{4} = \frac{2}{4}
\] |

<table>
<thead>
<tr>
<th>Change Unknown</th>
<th>Maya had (\frac{3}{4}) of a pizza. She gave her friend some of the pizza. She has (\frac{3}{4}) left. How much did she give her friend?</th>
</tr>
</thead>
</table>
| ![Diagram](image2) | **Think Subtraction:**  
\[
\frac{3}{4} - \frac{2}{4} = \frac{1}{4}
\]  

or  
\[
\frac{3}{4} - \frac{1}{4} = \frac{2}{4}
\] |

<table>
<thead>
<tr>
<th>Initial Unknown</th>
<th>Maya had part of a pizza. She gave her friend (\frac{1}{4}) of the pizza. She has (\frac{3}{4}) left for herself. How much did she have to start with?</th>
</tr>
</thead>
</table>
| ![Diagram](image3) | **Think Addition:**  
\[
\frac{2}{4} + \frac{1}{4} = \frac{3}{4}
\] |
**Addition and Subtraction Grade 5**

### Result Unknown
A pile of sugar has a mass of 2.36 kg. If you use 1.23 kg of the sugar, what is left?

**Think Subtraction:**
\[
2.36 - 1.23 = 1.13
\]

### Change Unknown
A pile of sugar has a mass of 2.36 kg. If you use some and you have 1.13 kg of the sugar left, how much did you use?

**Think Subtraction:**
\[
2.36 - 1.13 = 1.23
\]

### Initial Unknown
You had a pile of sugar. If you use 1.23 kg of the sugar and you have 1.13 kg left over, what was the mass of the original pile?

**Think Addition:**
\[
1.13 + 1.23 = 2.36
\]
<table>
<thead>
