Examine the option of retaining Northside community elementary schools by removing excess building space where possible.

Considerations

A number of existing facilities have benefitted from elementary school facility expansions during time periods when the population was expanding – Florence and Seton as examples in the Northside Family of Schools. Additions were added to both Florence and Seton in 1975. The older portions of the buildings (Seton 1950, and Florence 1956) were retained and now are showing their age. More than enough space exists in the 1975 addition of each building to house students from the respective school communities.

An engineering study would be required to identify demolition and remodelling costs associated with the implementation of this option.
